Student ID: 650152

Class: 1_WT-FED-U-F08

Trainer: Muhammad Umar Sajid

Campus: Bano Qabil Sahiwal

Session: 02

Documentation Report

1. Project Overview

This project is based on creating a complete single-page website for the University of Sahiwal using HTML and CSS. The purpose of this assignment was not to copy the official website, but to study it carefully and create a cleaner, more structured, and improved version.

The focus of this project was clarity, proper structure, and correct use of basic front-end concepts. I tried to design a simple, professional, and user-friendly homepage that presents university information in an organized way.

2. Planning and Design Process

Before starting coding, I first analyzed the official University of Sahiwal website. I observed that some sections looked crowded and spacing was not very balanced. My goal was to improve structure, spacing, and readability.

Figma Design

I first created the homepage design in Figma. This was my first time using Figma, so I faced difficulty in alignment, spacing, and layout tools. I was not fully familiar with auto layout and grid systems.

However, I tried my best to plan all sections in proper order:

1. Header
2. Hero Section
3. University Highlights
4. About Section
5. Events
6. News
7. Departments & Programs
8. Scholarships
9. Why Choose Us
10. Faculty
11. Accreditations
12. Footer

After starting HTML and CSS, I improved some design parts directly in the code because I understood spacing and alignment better during development.

Figma Link:

<https://www.figma.com/design/mMJbzcY84H4ofTdpsOLAQy/uni-of-swl?node-id=35-8&t=zMlejEc8Dns68Ze3-1>

3. HTML Structure

While writing HTML, I followed proper semantic structure. I used:

- `<header>` for top navigation
- `<section>` for content areas
- `<article>` for cards
- `<aside>` for side content
- `<footer>` for bottom section

I also added important SEO meta tags in the `<head>` section such as:

- Title
- Description
- Keywords
- Open Graph tags

This improves search engine visibility and shows understanding of SEO basics.

4. CSS Implementation

All styling was written in an external CSS file.

In CSS, I worked on:

- Flexbox for navigation and alignment
- Grid layout for cards and departments
- Hover effects
- Shadows and border radius
- Consistent spacing
- Green color theme

I used a green theme instead of blue to give a fresh and modern educational look.

5. Section-wise Explanation

5.1 Header Section

The header contains:

- Top bar with social media icons, phone number, and email
- Main navigation menu
- Apply Now button

The navigation is clean and properly spaced. The Apply button has hover effect for better interaction.

5.2 Hero Section

The hero section includes:

- University name
- Tagline
- Short description
- Two buttons

I used a background image with a green gradient overlay to improve text visibility.

Main Difficulty Faced

The biggest challenge I faced was adjusting the hero image properly.

The image appears slightly split and not perfectly aligned. I tried different properties like:

- `background-size: cover`
- `background-position: center`
- Gradient overlay

Even though it is not 100% perfect, I tried my best to adjust it properly and improve its appearance.

5.3 University Highlights Section

This section contains four feature cards:

- Latest News
- Scholarships
- Research
- Accreditations

Each card includes:

- Icon
- Title
- Short description
- Link

I added hover effects to make cards interactive.

5.4 About Section

This section explains the university briefly.

Left side includes:

- Introduction paragraph
- Bullet points
- Explore button

Right side includes statistics cards:

- Departments
- Programs
- Students
- Faculty

These cards have hover shadow effect.

5.5 Events Section

This section shows upcoming university events.

Each card includes:

- Image
- Date
- Title
- Description
- Read More link

Grid layout keeps everything balanced.

5.6 News Section

This section includes:

- One featured news
- Four small news items

Hover effect changes background color to light green.

5.7 Departments & Programs Section

This section displays different departments with program lists.

Each card contains:

- Department image
- List of programs
- View Programs button

Grid layout ensures clean alignment.

5.8 Scholarship Section

This section highlights financial support opportunities.

It has:

- Green gradient background
- Description
- Apply button
- List of scholarships

This section makes the website look strong and informative.

5.9 Why Choose Us Section

This section explains university benefits:

- Experienced Faculty
- Modern Laboratories
- Scholarships
- Career Development

Each box has hover effect and shadow.

5.10 Faculty Section

This section displays faculty members with:

- Circular images
- Names
- Designations

Hover effect changes border color and slightly moves the card.

5.11 Accreditations Section

This section shows university recognition logos.

Logos are grayscale by default and become colored on hover.

5.12 Footer Section

The footer contains:

- About information
- Quick links
- Academic links
- Contact details
- Social media icons

It also includes copyright text at the bottom.

6. Improvements Compared to Original Website

In my version, I improved:

- Better spacing and alignment
- Cleaner layout
- Consistent green theme
- Modern card design
- Hover effects
- Structured content presentation

My design looks more organized and balanced.

7. Challenges Faced

During this project, I faced several challenges:

1. Hero image alignment issue
2. Proper spacing between sections
3. Using Figma for the first time
4. Managing grid layout for many cards
5. Keeping design simple but modern

However, I learned a lot by solving these problems.

8. What I Learned

From this project, I learned:

- How to plan website structure
- How to use semantic HTML
- How to apply SEO basics
- How to use Flexbox and Grid
- How to convert Figma design into real code
- How to improve design directly in CSS

This project improved my front-end development skills.

9. Conclusion

This project helped me understand how to design and develop a complete single-page website using HTML and CSS.

Although I faced some difficulties, especially with the hero image and alignment, I sincerely tried my best to create a clean and professional layout.

Overall, this assignment strengthened my understanding of structure, design improvement, and front-end development basics.
